Education

University of Southern California — Los Angeles, CA
Master of Science in Computer Science; GPA: 3.85/4.0 — *Jan 2025 – Dec 2026*

University of Leeds — Leeds, UK
Bachelor of Science in Computer Science, First Class Honours; GPA: 3.7/4.0 — *Sep 2020 – Jun 2024*

Experience

Mulholland — Aug 2026 – Oct 2026
Applied AI Engineer

- Built an AI-assisted supplier workflow that combines Gemini photo-to-field suggestions with real-time validation and buyer review; replaced an ecommerce client's email-and-spreadsheet process with account-free vendor submission and a unified issue queue supporting 500-row batches.
- Developed a production Gemini-powered payroll agent workflow for nearly 50 client accounts; transcribed timecards, replayed client rules and human corrections, and surfaced ambiguous cases for review, raising recognition accuracy from 71.4% to 98.1% while cutting processing time and token use by 50%.

Shanghai SmartLogic Technology Ltd. — May 2026 – August 2026
SoC System Modeling Intern

- Built a Python pipeline for sparse binary traces split into 10KB shards; generated manifest indexes of clock ranges and metadata to serve targeted time-window queries.
- Designed progressive aggregations (first, last, start, end, average) and raw-data drill-down for trillion-scale trace trends, reducing initial diagnosis from 30 minutes to 5.
- Transformed trace entries into an SDB interconnect model, computing per-link phase and global bandwidth for chip-level performance analysis.

Yimikang Technology Group — Jun 2024 – Aug 2024
Software Engineer Intern, R&D

- Developed in Go and led end-to-end deployment of a distributed edge data collection pipeline spanning device, gateway, and backend layers, ensuring high availability under burst traffic.
- Built a Python-based data center cooling simulator generating high-fidelity workload streams for ML model optimization, cutting peak energy consumption by 20%.
- Productionized data collection services with Docker and GitHub Actions CI/CD, adding linters, integration tests, and observability hooks to harden prototypes for production.

China Mobile Payment Co., Ltd. — Jun 2022 – Aug 2022
Software Engineer Intern, Platform & Security

- Architected a stateless, horizontally scalable authentication microservice on Spring Boot and MySQL, supporting a 3x increase in traffic volume while maintaining low latency.

Projects

Peeko | *React, TypeScript, Node.js, Deepgram, Claude API* — Apr 2026

- Built an end-to-end vector data pipeline: ingested user-uploaded documents, chunked and embedded content with Voyage AI, and stored vectors in Supabase pgvector for low-latency top-k retrieval at query time.

DayPilot | *Python, FastAPI, Google ADK, Gemini API, MongoDB Atlas* — May 2026

- Designed a parallel context pre-loading pipeline on Google Cloud Run that hydrates agent state from MongoDB Atlas before every LLM turn, eliminating redundant round-trips and cutting per-request latency.

Technical Skills

Languages & Frameworks: Python, TypeScript, React, Java, JavaScript, C++, SQL, Go

Databases & Tools: ML/AI, MySQL, Redis, Docker, GitHub Actions, Git, Linux
